Subject: Site Visit with Darriel Coleman
MVS-2009-774 Coleman Rotary Drilling Supply Filling in Floodplain

Summary: Attendees - Darriel Coleman, Rob Gramke, Jerry Berning

Mr. Coleman stated that he began filling the site (approximately 13-acres) after the 1993 flood with waste sandbags. Additional fill was brought into the site from local construction/demo projects or the material was purchased from the adjacent quarry. The most recent fill material (from the past two years) came from Ameren UE in the form of fly ash and Gypsum (calcium sulfate). With the exception of a small creek around the perimeter of the site, the entire wetland area has been filled. The site would have originally contained a mix of forested wetland, emergent wetland, and an unnamed tributary.

Mr. Coleman stated that he had a permit in 1993, but that he had no record of the permit or paperwork.

In conjunction with R.L. Jones Properties, TCL Construction (Jerry Capps), City of Crystal City, MODOT, and the Bank of Bloomsdale, the group intends to develop a large piece of commercial property in this area. However, it appears that Mr. Coleman and Kline-Smith Trucking have placed the fill on the property.

Mr. Coleman was adamant that he was not aware of any permit requirements from the Corps of Engineers and that he has always complied with requirements for the City of Crystal City and MDNR. His contact at Crystal City is currently Dave Kozal and his contact with MDNR is Stuart Bean.

Mr. Coleman's door had a MDNR Permit posted on the door with Permit MO R109EN6 and phone number 1-800-361-4827.

Mr. Coleman also owns property in Ste. Genevieve County near the Holcim Property. He currently owns 700-acres between Highway 55 and 61. Some of the property is East of Highway 55. His home address is 3649 Highway 61, Ste. Genevieve, Missouri. Mr. Coleman stated that if mitigation is necessary, then this site may offer opportunities.

I informed Mr. Coleman that I will need to have contact name for Ameren and that I will be contacting Dave Kosall and try to contact Stuart Bean (MDNR). I also stated that it appears that 5 to 13 acres of wetland have been filled and that this is a violation of Section 404 of the Clean Water Act. A notice of violation letter will be going out soon. The site adjacent to this area was saturated, contained hydric soils, and is dominated by Pin Oak and Green Ash trees (Forested Wetland).
